

BEYOND DIGITAL

ON-LINE PEER EXCHANGE III

15:00-17:15 CEST, 08 & 09 SEPTEMBER 2020

The objective of the Beyond Digital Platform is to facilitate the first professional forum within the power sector focused on unlocking the potential of utilising AI and digital technologies and designing a common AI Vision for the power sector in a post-digital age.

On 8th and 9th of September the Beyond Digital expert group will continue discussing most pressing topics for energy companies in digital transformation. Firstly, we will analyse in detail the proposed structure of the AI Vision paper that will be published at the Digitopia event in Brussels on 26th of November. Also, we will hear from a prominent EU official on the European AI agenda as alignment between policy makers and power industry on data protection, access and ownership is a necessary step towards an ecosystem based on collaboration and trust.

This meeting will be accessible for platform's registered members only and will facilitate a real time exchange between all participants.

08 SEPTEMBER, TUESDAY

15:00-15:30 | 30 minutes
